Energy rating

D

33 Balfour Grove  
LONDON  
N20 0SN

Valid until 17 March 2032

Certificate number 2221-0052-0205-1120-1491

**Property type**

Ground-floor maisonette

**Total floor area**

53 square metres

**Rules on letting this property**

Properties can be rented if they have an energy rating from A to E.

If the property is rated F or G, it cannot be let, unless an exemption has been registered. You can read [guidance for landlords on the regulations and exemptions](#).

**Energy efficiency rating for this property**

This property's current energy rating is D. It has the potential to be C.

[See how to improve this property's energy performance.](#)

A B C D E F G 92+ 81-91 69-80 55-68 39-54 21-38 1-20  
Score Energy rating Current Potential 66 | D 76 | C

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

For properties in England and Wales:

- the average energy rating is D
- the average energy score is 60

**Breakdown of property's energy performance**

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says “assumed”, it means that the feature could not be inspected and an assumption has been made based on the property’s age and type.

<b>Feature</b>	<b>Description</b>	<b>Rating</b>
<b>Wall</b>	Solid brick, as built, no insulation (assumed)	Very poor
<b>Window</b>	Mostly double glazing	Good
<b>Main heating</b>	Boiler and radiators, mains gas	Good
<b>Main heating control</b>	Programmer and room thermostat	Average
<b>Hot water</b>	From main system	Good
<b>Lighting</b>	Low energy lighting in all fixed outlets	Very good
<b>Roof</b>	(another dwelling above)	N/A
<b>Floor</b>	Suspended, no insulation (assumed)	N/A
<b>Floor</b>	Solid, no insulation (assumed)	N/A
<b>Secondary heating</b>	None	N/A

## Primary energy use

The primary energy use for this property per year is 260 kilowatt hours per square metre (kWh/m<sup>2</sup>).

What is primary energy use?

- 
- 
- 

## Environmental impact of this property

This property's current environmental impact rating is D. It has the potential to be C.

Properties are rated in a scale from A to G based on how much carbon dioxide (CO<sub>2</sub>) they produce.

Properties with an A rating produce less CO<sub>2</sub> than G rated properties.

**An average household produces**

6 tonnes of CO<sub>2</sub>

**This property produces**

2.4 tonnes of CO<sub>2</sub>

**This property's potential production**

1.5 tonnes of CO<sub>2</sub>

By making the [recommended changes](#), you could reduce this property's CO<sub>2</sub> emissions by 0.9 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

## Improve this property's energy performance

Potential energy rating

C

By following our step by step recommendations you could reduce this property's energy use and potentially save money.

Carrying out these changes in order will improve the property's energy rating and score from D (66) to C (76).

Do I need to follow these steps in order?

---

### **Step 1: Internal or external wall insulation**

Internal or external wall insulation

**Typical installation cost**

£4,000 - £14,000

**Typical yearly saving**

£113

**Potential rating after completing step 1**

73 | C

### **Step 2: Floor insulation (suspended floor)**

Floor insulation (suspended floor)

**Typical installation cost**

£800 - £1,200

**Typical yearly saving**

£36

**Potential rating after completing steps 1 and 2**

76 | C

### **Paying for energy improvements**

[Find energy grants and ways to save energy in your home.](#)

## **Estimated energy use and potential savings**

**Estimated yearly energy cost for this property**

£545

**Potential saving**

£150

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

The potential saving shows how much money you could save if you [complete each recommended step in order](#).

For advice on how to reduce your energy bills visit [Simple Energy Advice](#).

## Heating use in this property

Heating a property usually makes up the majority of energy costs.

### Estimated energy used to heat this property

Type of heating	Estimated energy used
-----------------	-----------------------

---

Space heating	7385 kWh per year
---------------	-------------------

---

Water heating	1744 kWh per year
---------------	-------------------

---

### Potential energy savings by installing insulation

Type of insulation	Amount of energy saved
--------------------	------------------------

---

Solid wall insulation	2826 kWh per year
-----------------------	-------------------

---

## Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.

### Assessor contact details

**Assessor's name**

Michael Harrison

**Telephone**

07932567157
